

Find the software version and model of your iPhone, iPad or iPod

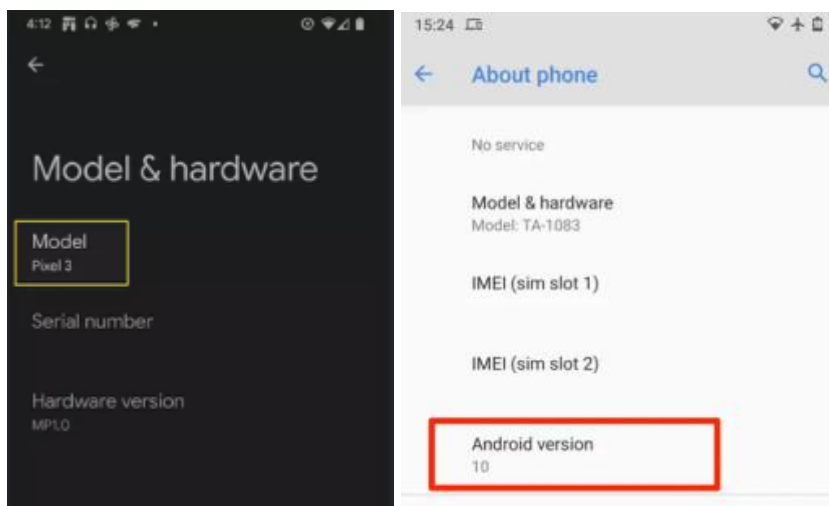

To find the software version and model of your device, go to **Settings > General**, then tap **About**.

Find the software version and model of your Android device.

To find the software version of your Android device, go to **Settings > About Phone** or **About Device > Android Version**.

To find the Model of your Android device, go to **Settings > About Phone** or **About Device > Model**.

Check if the device is Jailbroken / Rooted.

On **iPhone**, search for an app called **Cydia** (see photo)

If this app is installed, this means the phone has been **Jailbroken**.

On **Android**, go to **Settings > About Phone > Status > Phone Status**.

If it says anything other than **Official** under phone status, then the phone has been **Rooted**.
